**WHO Secretariat:** Katherine Littler, Co-Unit Head of Health Ethics & Governance in the Department of Research for Health in the Science Division of the World Health Organization, Sylvie Briand, Director of Pandemic and Epidemic Preparedness and Prevention in the Health Emergencies Programme, Tina Purnat, Team Lead for Infodemic Management in the Unit for High Impact Events Preparedness of the Department of Pandemic and Epidemic Preparedness and Prevention, John Reeder, Acting Chief Scientist and Director of Research for Health Department in the Science Division, Andreas Reis, Co-Unit Head of Health Ethics & Governance in the Department of Research for Health in the Science Division, and Sandra Varaidzo Machiri from the African Field Epidemiology Network in Zimbabwe.

**Co-chairs of the group:** Isabella Ballalai from the Brazilian Immunization Society and Calvin Ho from the Centre for Medical Ethics and Law at Hong Kong University.

**Experts involved:** Najeeb Al-Shorbaji from the Jordan Library and Information Association, Thalia Arawi from the American University of Beirut, Cherstyn Hurley from the Health Security Agency in the UK, Dimitra Lingri from the European Healthcare Fraud & Corruption Network (EHFCN) and the Department of Law at the Faculty of Law at Aristotle University of Thessaloniki in Greece, Stefan Mandic-Rajcevic from the Infodemiology Lab at the School of Medicine at the University of Belgrade in Serbia, Lisa Talia Moretti from AND Digital in the UK, Syed Nakazat from the DataLEADS Foundation in India, Claudia Pagliari from The Usher Institute at the University of Edinburgh in the UK, Alejandro Posada from Internews in Bogotá, Colombia, Ana Lorena Ruano from the Center of Studies for Governance and Equity in Health Systems in Guatemala, David Scales from the Weill Cornell Medical College at Cornell University in the USA, Max Smith from the School of Health Studies at Western University in Canada, Theresa M Senft from Macquarie University in Australia, Harry Sufehmi from MAFINDO in Indonesia, Ross Upshur from the Dalla Lana Faculty of Public Health at the University of Toronto in Canada, and Fatou Wurie from Harvard University in the USA.

**Observers:** Surangani Abeysekera from UNICEF, Guilherme Canela De Souza Godoi from UNESCO, Timothy K Mackey from the University of California, San Diego, Lee Hibbard from the Council of Europe, and Betsy Mitchell from the US Centers for Disease Control and Prevention.

1. Defining the problem

2. The process

3. Gathering evidence

4. Architecture

# 1. Defining the problem

*WHO/Sam Bradd*

Too much information, including false or misleading information, in digital and physical environments during a disease outbreak.

- causes confusion and risk-taking behaviours that can harm health;
- leads to mistrust in health authorities;
- undermines the public health response;
- can intensify or lengthen outbreaks.

## Infodemic management

the systematic use of risk- and evidence-based analysis and approaches to manage the infodemic and reduce its impact on health behaviours during health emergencies.

- Listening to community concerns and questions;
- Promoting understanding of risk and health expert advice;
- Building resilience to misinformation;
- Engaging and empowering communities to take positive action.

# Defining the problem

---

- Effectiveness: ability to produce benefit in real life conditions
- Autonomy: the combination of intentionality, understanding and non-control
- Fairness: a comprehensive set of basic rights and liberties that can coexist with similar rights for all

Vulnerability of individuals and communities

Active and passive freedom of information

Trust

Transparency

# An ad hoc WHO technical consultation managing the COVID-19 infodemic: call for action

WHO, 2020

['WHO - An ad hoc WHO technical.pdf']

The screenshot shows a Zoom meeting window. The top toolbar includes a search icon, navigation arrows, a search box containing 'intro1 (1 di 56)', zoom controls (minus, plus, 'Zoom automatico'), and icons for print, share, help, and close. The main slide area has a dark blue background with the text 'AN AD HOC WHO TECHNICAL CONSULTATION' in orange, 'Managing the COVID-19 infodemic' in large white font, and 'CALL FOR ACTION' in smaller white font. A 'LIVE WEBINAR' badge is in the top right corner.

# 4. Architecture

# Architecture of the framework

---

# Challenges

---

Managing **power imbalance** and **guaranteeing good governance**

Working in conditions of **uncertainty** (epistemic underdetermination, truth, revisability, reliability, certitude)

Ensuring Infodemic management **effectiveness**

## Process aims

---

Respect for human rights / human rights-based approach

Preserve and build trust, reciprocal trust, trustworthiness

Apply fair, equitable and inclusive processes of decision making

Guarantee integrity of actors and actions

Value public engagement

Pursue understandability

Driven by beneficence

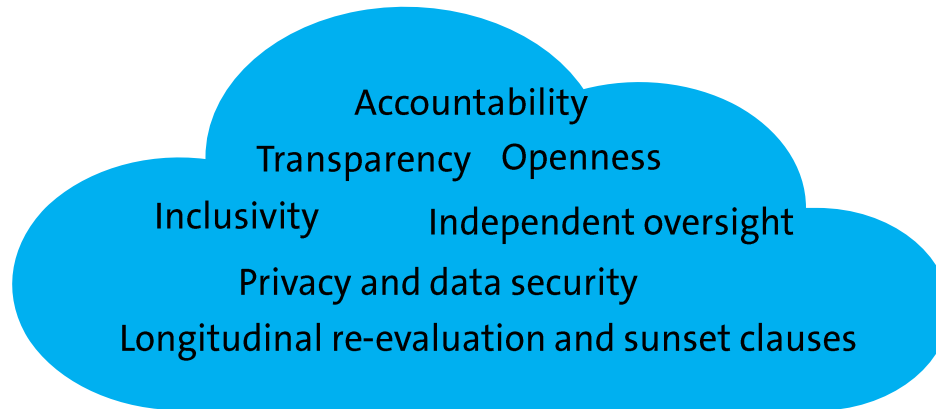

Balanced by necessity, utility, proportionality, and least intrusive approaches

# Principles

---

Still work in progress!

Principles help translating challenges and aims which exist in abstract (i.e.: what we want to avoid and where we want to go) into codified processes to be incorporated into the guidance.

...

## Guidance/recommendations

---

**Still work in progress!**

**Recommendations** help shaping concrete actions according to ethical desirability.

**Recommendations** target specific stakeholders (e.g.: International health organizations; national governments; public health officials, ...) and specific infodemic management activities (e.g.: capacity building; planning infodemic response procedures; collecting infodemic insights; ...) with a pragmatic life cycle approach.

# SUMMARIZING:

- Infodemics and infodemic management pose significant challenges.
- An **ethical framework** is necessary for effective infodemic management.
- The development process is based on both literature and experts' views.
- The architecture includes definitions, ethical challenges, process aims, principles, and stakeholder-specific guidance
